Mission Status Report 122 Page 1/2 Reference Period: 30 August 2016 – 5 September 2016

→ RADAR VISION FOR COPERNICUS

Mission status

- The Sentinel-1A routine operations are on-going
- Sentinel-1B has been launched on 25 April 2016, the Commissioning Phase is on-going see next page
- Sentinel-1A data can be accessed from: https://sentinels.copernicus.eu
- The observation scenario supports the systematic coverage of a first set of Copernicus Services
 areas of interest, of European land and coastal waters, of global tectonic/volcanic areas, as well as
 of other specific areas worldwide for various applications. The observation plan also includes
 regular mapping of all land areas worldwide. Specific Sentinel-1A acquisitions are being temporarily
 planned to support the commissioning phase of Sentinel-1B for cross-calibration. An overview of the
 observation scenario is available at: https://sentinels.copernicus.eu/web/sentinel/missions/sentinel-1/observation-scenario
- The detailed observation plan in the form of instrument acquisition segments is published at: https://sentinels.copernicus.eu/web/sentinel/missions/sentinel-1/observation-scenario/acquisition-segments
- The operational use of Sentinel-1A data by the Copernicus Marine Environment Monitoring Service for sea-ice and iceberg monitoring activities is on-going
- The European Maritime Safety Agency (EMSA) has introduced in the CleanSeaNet service the use
 of Sentinel-1 imagery in quasi-real time, operations with EMSA service providers local stations are
 on-going
- The EDRS-A Sentinel-1A user commissioning is on-going
- The Sentinel-1A spacecraft is in a stable state, operating in Nominal Mission Mode (NMM). The Flight Operations Segment (FOS) ensuring the monitoring, control and commanding of the satellite is operating nominally. Orbit control manoeuvres are performed once a week
- A Sentinel-1A solar panel was hit by a space particle on 23 August, resulting in a 5% reduction of
 the power generated by the solar array. This power reduction does not have any impact on the
 mission operations. More information at:
 http://www.esa.int/Our Activities/Observing the Earth/Copernicus/Sentinel-1/Copernicus Sentinel1A satellite hit by space particle
- X-Band data acquisitions are routinely performed over Matera, Svalbard and Maspalomas X-band core stations. The acquired data are circulated within the Payload Data Ground Segment (PDGS), systematically processed to Level-0 and Level-1 products and archived
- Wave Mode data are regularly acquired over open oceans, systematically processed to Level-2
 OCN products and made available. Sentinel-1 IW and EW Level-2 OCN products over regional
 ocean areas are available on the Scientific Data Hub. The operational qualification of Level-2 OCN
 products is on-going (geophysical validation of the Radial Surface Velocity component)
- Operations are performed regularly at the Processing and Archiving Centres (DLR-PAC and UK-PAC). All other PDGS operational services (i.e. Mission Performance, Precise Orbit Determination, Wide Area Network) are operating nominally
- Since 21 July 2015, 100% of the IW and SM data over land are systematically produced to level 1 SLC. SLC IW production has being extended to all data at global level, i.e. acquired over seas and sea-ice as well
- By 1st September 2016, a total of 44,709 users have self-registered on the Sentinels Scientific Data Hub; 5,267,105 product download have been made by users, corresponding to about 5.9 PB of data. At the time of publishing this report, more than 671,000 Sentinel-1A products are available online for download, representing about 880 TB of data. Statistics of last 24 hours are available in real time at the Data Hub home page (https://scihub.copernicus.eu).

Outlook

- Continuation of Sentinel-1A routine mission operations
- Continuation of EDRS-A Sentinel-1A user commissioning

Sentinel-1B Commissioning Phase

- Sentinel-1B was launched on 25 April 2016 from Kourou, French Guiana
- The Sentinel-1B launch time-lapse video has been made available at: http://www.esa.int/spaceinvideos/Videos/2016/05/Sentinel-1B prepares for liftoff April 2016
- The Launch and Early Orbit Phase (LEOP) was successfully completed on 28 April. All
 deployments were successfully performed during the first 10 hours after launch (i.e. SAR
 antenna and solar panels) and initial checks of the various Platform and Payload sub-systems
 were successfully executed
- The SAR payload was activated on 28 April, the first data takes were acquired at 05:37 UTC, only 56 hours after lift-off, and downloaded at the Matera station few minutes later. These data were immediately processed by the Payload Data Ground Segment
- The first Sentinel-1B images were published on 28 April, less than three days after lift-off. See
 more information at: http://www.esa.int/Our Activities/Observing the Earth/Copernicus/Sentinel-1/Sentinel-1B_delivers
- The satellite Commissioning Phase started on 29 April. All equipment and sub-systems are nominal and running on the prime units
- The commissioning of the Platform subsystems has been completed
- The Optical Communication Payload (OCP) on-board verification has been completed
- Sentinel-1B reached its orbital location on 16 June 2016, synchronised with Sentinel-1A at 180 deg. in the same orbital plane and it is now under nominal orbital control, keeping it and Sentinel-1A, within the same ground track of +/-120 meters
- Sentinel-1B and Sentinel-A data were combined to form the first interferogram on the very first
 day of reaching the target orbit position. See more information at:
 http://www.esa.int/Our Activities/Observing the Earth/Copernicus/Sentinel-1/Sentinel-1 satellites combine radar vision
- The Star Tracker inter alignment activities have been completed
- The initial SAR Pointing measurements have been completed
- The data from the additional SAR Pointing acquisitions has been consolidated with previous data and the overall analysis of the SAR Pointing is now complete
- The SAR calibration, characterisation and performance verification activities are nearing an end
 with the majority of the analysis completed. The Commissioning team is fully engaged in the
 completion of the remaining analysis of the data prior to the In-Orbit Commissioning Review that
 will take place on 14 September 2016
- The Sentinel-1B commissioning phase activities are planned to be completed by mid-September 2016 culminating with the In Orbit Commissioning Review

Outlook

- Completion of the Sentinel-1B Commissioning Phase
- Completion of SAR performance verification activities
- Completion of Sentinel-1B/Sentinel-1A Cross-calibration
- In-Orbit Commissioning Review
