

# MISSION STATUS 13-20 July 2016

## sentinel-3

→ A BIGGER PICTURE FOR COPERNICUS

### OVERALL MISSION

- The overall status of the spacecraft is nominal, with all subsystem performing nominally.
- All instruments are switched on and performing nominally:
  - OLCI is ON with mode switching between Normal and Silent .
  - SRAL is ON and operated in 100% SAR mode (SAR Open Loop and SAR Closed Loop with DEM reading enabled).
  - SLSTR is switched ON switching between Day and Night for what concerns Instrument Source Packet (ISP) generation.
  - MWR is ON in operational mode.
- The Flight Operations Segment (FOS) is operating nominally.
- The Payload Data Ground Segment (PDGS) is operating nominally as expected in the mission ramp-up phase, gradually moving towards full operational capacity. Level 0 production continues successfully for all instruments at the Core Ground Station in Svalbard and at EUMETSAT’s marine centre. Level 1 and some preliminary level 2 data production continues at the Processing and Archiving Centres (PAC) and EUMETSAT’s marine centre for all instruments.

### MISSION MANAGEMENT

- The Sentinel-3A commissioning phase ended on 12th July with the successful passing of the In-Orbit Commissioning Review (IOCR). The mission is now in the ramp-up phase, moving towards full operational capacity at approximately IOCR + 9 months.
- The handover between ESA’s Sentinel-3A development and operations teams took place on 13 July, followed by the handover of the responsibility for the day-to-day running of the spacecraft from ESA to EUMETSAT. The handover of the Marine PDGS from SA to EUMETSAT will take place end of September, following the successful implementation of the next version of the PDGS (v3).

### DATA AVAILABILITY AND ACCESS

- Following IOCR, some remaining issues for the released sample data products (see below) will need to be addressed. The release of the level 1 core data products to the general user community is foreseen for September.
- The following sample data products are available to Sentinel-3A expert users:

Data product (*)	Released on	Available data
OLCI L1 (FR)	11 May	9 May - today
OLCI L2 over land (ESA)	20 June	20 June - today
OLCI L2 over ocean (EUMETSAT)	22 June	22 June - today
SLSTR L1	13 June	8 June – today
SLSTR L2 - LST (ESA)	20 June	9 June - today
SLSTR L2 - SST (EUMETSAT)	21 June	21 June – today
SRAL L1B (**)	15 June	6 April – 6 May (SAR), 9-12 April (LRM); 18 June- today
SRAL L2 over land (ESA)	15 June	6 April – 6 May (SAR), 9-12 April (LRM) 18 June- today
SRAL L2 over ocean (EUMETSAT)	15 June	6 April – 6 May (SAR), 9-12 April (LRM)

(\*) SYN, AOD, FRP products to be released in ramp-up phase  
(\*\*) full L1A, L1BS available from PDGS v3 only

### USER INTERACTION

- An expert user meeting engaging the Sentinel-3 validation team took place on 28-30 June at ESA-ESRIN. This meeting aimed at proving early access to sample data products to expert users and gathering their feedback on data quality and data access early in the mission.
- The Sentinel-3 Quality Working Groups met for the first time on 28 June 2016.
- A Sentinel-3 Validation Team (S3VT) is planned for 22-24 November 2016 at ESA-ESRIN, Frascati, Italy.

### OUTLOOK

- Release of operationally qualified Level 1 core data products in September 2016.
- Gradual release of Level 2 sample products over land and ocean, including the SYN products the new products on Aerosol Optical Depth (AOD) and Fire Radiative Power (FRP).
- Implementation of the v3 of the PDGS, which will provide additional SRAL Level 1 data products.
