

sentinel-1

→ RADAR VISION FOR COPERNICUS

Mission Status Report 181

Reference Period: 7 November – 13 November 2017

Mission status

- The Sentinel-1A and Sentinel-1B routine operations are on-going
- The Sentinel-1 observation scenario supports the systematic coverage of Copernicus Services areas of interest, of European land and coastal waters, of global tectonic/volcanic areas, as well as of other areas worldwide for various applications. The observation plan also includes a regular mapping of all land areas worldwide, with a coverage frequency largely increased with Sentinel-1B in operations. Since 26 September 2016, the Sentinel-1 observation plan is implemented with the combined use of Sentinel-1A and Sentinel-1B
- Updated world maps as of May 2017 providing a high level description of the overall Sentinel-1 constellation observation scenario, in terms of SAR modes, polarisation, observation geometry, revisit and coverage frequency are available at:
<https://sentinels.copernicus.eu/web/sentinel/missions/sentinel-1/observation-scenario>
- The detailed observation plan in the form of instrument acquisition segments, for both Sentinel-1A and Sentinel-1B is published at: <https://sentinels.copernicus.eu/web/sentinel/missions/sentinel-1/observation-scenario/acquisition-segments>
- The operational use of Sentinel-1 data by the Copernicus Marine Environment Monitoring Service (CMEMS) for sea-ice and iceberg monitoring activities is on-going
- The European Maritime Safety Agency (EMSA) operationally uses Sentinel-1 imagery in quasi-real time in the CleanSeaNet services; operations with EMSA service providers local stations are on-going. **The conference “Celebrating 10 years of the CleanSeaNet service and cooperation between ESA and EMSA” is planned to take place at EMSA in Lisbon on 14-15 November.**
- **Related to the M 7.3 major earthquake that occurred in Iran / Iraq on 12 November 2017, additional acquisitions have been planned on Sentinel-1B (in complement to the already planned Sentinel-1A passes) to allow performing interferometry at 6 days**
- The use of the EDRS-A service by Sentinel-1A and Sentinel-1B is on-going as part of the routine operations
- Both Sentinel-1A and -1B spacecraft are in a stable state, operating in Nominal Mission Mode (NMM). The Flight Operations Segment (FOS) ensuring the monitoring, control and commanding of the satellites is operating nominally. Orbit control manoeuvres are performed once a week
- **The 6th Sentinel-1 satellite In-Orbit Performance Review will take place from 14 to 16 November 2017 in Rome, at Thales Alenia Space premises.**
- X-Band data acquisitions are routinely performed over Matera, Svalbard and Maspalomas X-band core stations. The acquired data are circulated within the Payload Data Ground Segment (PDGS), systematically processed to Level-0 and Level-1 products and archived
- Wave Mode data are regularly acquired over open oceans, systematically processed to Level-2 OCN products and made available. Sentinel-1 IW and EW Level-2 OCN products over regional ocean areas are available on the Data Hubs. **The gradual implementation of the generation and distribution of Sentinel-1 level-2 OCN products derived from IW, EW and SM modes over seas at global level is close to completion.** The operational qualification of the Level-2 the OCN Radial Surface Velocity (RVL) component is on-going
- Operations are performed regularly at the Processing and Archiving Centres (DLR-PAC and UK-PAC). All other PDGS operational services (i.e. Mission Performance, Precise Orbit Determination, Wide Area Network) are operating nominally
- **By 9th November 2017, a total of 110,781 users have self-registered on the Sentinels Scientific Data Hub; 11 million Sentinel-1 product download have been made by users, corresponding to nearly 14 PB of data. 1.9 million Sentinel-1 products are available on-line for download, representing 3 PB of data. Statistics of last 24 hours are available in real time at the Data Hub home page: <https://scihub.copernicus.eu>**

Outlook

- Continuation of Sentinel-1 constellation routine operations
- **6th Sentinel-1 satellite In-Orbit Performance Review (14-16 November 2017)**
