Mission Status

- Sentinel-2A and -2B are together acquiring Europe, Africa and Greenland with 5 days revisit. The rest of the World is revisited at least every 10 days jointly by the two satellites. Global systematic 5-day revisit will be reached once the 4th ground station (Inuvik) and EDRS become fully operational.
- The Sentinel-2 acquisition scenario is published at: https://sentinels.copernicus.eu/web/sentinel/missions/sentinel-2/acquisition-plans
- The acquisition scenario has been executed with an average MSI sensing time per orbit of 10.9 minutes for S2A and 13.8 minutes for S2B.
- As from 08 January 2018, acquisitions over Antarctica resumed with Sentinel-2A.

- The routine production of Level-1C top-of-atmosphere products (globally) is available in all the Data Hubs.
- The pilot production of Level-2A surface reflectance products (over Europe and for Sentinel-2A only) is available on the Open Access and Copernicus Hubs. Sentinel-2B production will be available as from 16 January, and products with sensing date from 17 December 2017 onwards will be made progressively available.
- To date, a total of 117,397 users have self-registered on the Copernicus Open Access Hub. About 2.62 millions products are available for download, cumulating a total volume of 1.57 Petabytes. Overall, a total volume of 13.21 Petabytes has been downloaded by the user communities from the Copernicus Open Access Hub, the Copernicus Services Hub, the Collaborative GS Hub and the International Hub.

- A new version of the Sentinel-2A spectral response functions has been released. These updated Sentinel-2A spectral responses are mainly changing the responses for bands B01 and B02, and they correct inaccurate spectral responses provided previously. The new spectral response functions are applicable since the beginning of the mission, and the Level-1 ground processing will use them from 15 January 2018.
- Sentinel-2 Validation Team (S2VT) meeting will be held on 29-31 January 2018 at ESRIN. More information available at: https://nikal.eventsair.com/QuickEventWebsitePortal/sentinel-2-validation-team-meeting/s2vtm
- Land Products Validation and Evolution (LPVE) workshop will be held from 27 February to 01 March 2018 at ESRIN. More information available at: https://nikal.eventsair.com/QuickEventWebsitePortal/lpve-conference-2018/esa-conference

- The Flight Operations Segment (FOS) ensuring the monitoring, control and commanding of the satellite is operating nominally.
- S2A OCP operations are on hold while the contingency measures related to the anomaly on 13 November are being implemented. As part of these measures, new S2A OCP forbidden zones have been implemented and S2A OCP commissioning activities will resume as from 22 January 2018.
- X-band data acquisitions are routinely performed by the PDGS over Matera, Maspalomas and Svalbard core stations. The acquired data is systematically processed to Level-0 and Level-1 products, circulated, and archived.
- Operations are nominally performed at the Processing and Archiving Centres and other PDGS operational services (i.e. Mission Performance Centre, Precise Orbit Determination, Wide Area Network).

Outlook

- Resume S2A OCP ramp-up after having implemented the agreed contingency measures.
- Sentinel-2 constellation review.
