

## Mission Status Report 46

Reference Period: 01-15 Sep. 2019

### Mission Status

#### Overall

- The mission, in Phase E2 (Operations Phase) since 24<sup>th</sup> April 2018, has reached routine operations capacity at the beginning of March 2019.

#### Data availability and access

- Level 1B Radiance/Irradiance, Methane, Tropospheric Ozone (Offline); Carbon Monoxide, Formaldehyde, Nitrogen Dioxide, Sulphur Dioxide, Total Ozone, Aerosol Index and Cloud products (Offline and NRT) are available to the public via the Copernicus Sentinel-5 Precursor Data Hub – [s5phub.copernicus.eu](https://s5phub.copernicus.eu)

#### Platform

- All platform subsystems performed nominally.

#### TROPOMI Payload

- The TROPOMI instrument continues measuring in nominal operations baseline with a 360 orbit repeat cycle and since 6<sup>th</sup> August 2019 with a spatial resolution of 5.5 km along-track and 3.5 km across-track.

#### Ground Segment

- The status of both FOS and PDGS has been nominal. Routine scheduling, acquisition, processing and dissemination tasks were performed without major anomalies.
- The processing of the Diagnostic Data Set (DDS) for the verification/validation of the L2 Version 2.0 processors started on 12<sup>th</sup> September.

#### Level 1B / Level 2 processors

- A patch for the Version 2.0 of the L2 UPAS processor has been delivered by DLR to the PDGS on 9<sup>th</sup> September.

#### Cal/Val Activities

- The routine validation activities continued nominally for the publicly released products.

#### Outlook

- The Aerosol Layer Height product will be released to the public by the end of September.
