

## Mission Status Report 373

#### Reference Period: 14 September 2021 - 20 September 2021

#### **Mission status**

- The Copernicus Sentinel-1A and Sentinel-1B routine operations are on-going.
- Despite the critical situation in Europe due to the COVID-19, efforts are being made to ensure the continuity of the Sentinel-1 mission operations
- The Copernicus Sentinel-1 observation scenario supports the systematic coverage of Copernicus Services areas of interest, of European land and coastal waters, of global tectonic/volcanic areas, as well as of other areas worldwide for various applications. The observation plan also includes a regular mapping of all land areas worldwide.
- World maps providing a high level description of the Sentinel-1 constellation observation scenario, in terms of SAR modes, polarisation, observation geometry, revisit and coverage frequency are available at: <a href="https://sentinels.copernicus.eu/web/sentinel/missions/sentinel-1/observation-scenario">https://sentinels.copernicus.eu/web/sentinel/missions/sentinel-1/observation-scenario</a>
- The detailed observation plan in the form of instrument acquisition segments, for both Sentinel-1A and Sentinel-1B is published at: <u>https://sentinels.copernicus.eu/web/sentinel/missions/sentinel-1/observation-scenario/acquisition-segments</u>
- Sentinel-1 imagery (from regular observations part of the baseline plan) in combination with Cosmo-Skymed imagery was used for the activation EMSR546 from the Copernicus Emergency Management Service (CEMS) related to Volcano eruption in La Palma, Spain. Here is an example of grading product based on Sentinel-1A/B and Cosmo-Skymed data acquired on 20 September 2021: https://emergency.copernicus.eu/mapping/system/files/components/EMSR546\_AOI01\_G RA\_PRODUCT\_r1\_RTP02\_v1.jpg
- Both Sentinel-1A and -1B spacecraft are in a stable state, operating in Nominal Mission Mode (NMM). The Flight Operations Segment (FOS) ensuring the monitoring, control and commanding of the satellites is operating nominally. Orbit control manoeuvres are performed once a week
- A Sentinel-1A on-board software maintenance activity was performed as planned on 15 September 2021. See more details at: <u>https://sentinels.copernicus.eu/web/sentinel/-/copernicus-sentinel-1a-planned-unavailability-on-15-september-2021</u>
- The use of the EDRS-A service by Sentinel-1A and -1B is on-going as part of the routine operations
- The Sentinel-1 product format upgrade planned on 21 September 2021 has been
  postponed. See more information at: <u>https://sentinels.copernicus.eu/web/sentinel//sentinel-1-product-format-upgrade-to-version-3.9-postponed</u>
- Ground Segment operations have continued smoothly as part of the on-going Payload Data Ground Segment (PDGS) service operations, the transfer to the cloud has been finalised for all production related activities and data flows were modified to use public internet
- Sentinel-1 production is successfully performed on the cloud since 23 February 2021 in line with the new ground segment architecture and interfaces. The legacy PDGS PAC and PDMC centres have been decommissioned end of March 2021
- X-Band data acquisitions are routinely performed over Matera, Svalbard, Maspalomas and Neustrelitz X-band core stations. The acquired data are circulated within the PDGS, systematically processed to Level-0 and Level-1 products and archived
- Wave Mode data are regularly acquired over open oceans, systematically processed to Level-2 OCN products and made available. Sentinel-1 IW and EW Level-2 OCN products over regional ocean areas are available on the Data Hubs. The operations of the systematic generation and distribution of Sentinel-1 level-2 OCN products derived from IW, EW and SM modes over seas at global level is on-going since 15 November 2017 (relevant for the Wind component - OWI). The operational qualification of the Level-2 the OCN Radial Surface Velocity (RVL) component is ongoing.
- By 16 September 2021, a total of 525,063 users have self-registered on the Sentinels OpenAccess data Hub; 36 million Sentinel-1 product download have been made by users, representing 44.6 PB of data. 7 million Sentinel-1 products are available on-line for download, representing 11 PB of data. Statistics of last 24 hours are available in real time at the Open Data Hub home page: <u>https://scihub.copernicus.eu</u>

#### Outlook

Continuation of Sentinel-1 constellation routine operations

Report prepared by the ESA Sentinel-1 Team
